Buskro BK700 Portable Controller with Compose™ IQ Software

STANDARD SYSTEM

The brains behind a totally modular inkjet imaging system

Versatile and Upgradable

The BK700 Controller with Compose IQ software is a portable system controller that gives you total mix and match modularity. It allows you to build a system that meets your needs today and offers the promise of easy upgradability as your needs change. The controller can be used with stand-alone or inline bases of practically any make, and it supports various print technologies including Buskro HPQ, Elite, Combo and Atlas systems. With the BK700, you can build a custom inkjet imaging system from scratch or use it to reinvigorate older, competitive print stations with new Buskro technology, features and capabilities.

Latest Technology

This unit is capable of communicating and receiving data directly from a wide variety of reading devices or other system controllers. Full serial port configuration is enabled through a number of port and protocol controls. Like all Buskro equipment, the BK700 features state-of-the-art technology and the latest software. It can be your single solution for various application needs.

Sophisticated Compose Software

The BK700 lets you take full advantage of everything Compose Imaging Software has to offer. This Windows-based software is very user friendly and accurately reflects TruType fonts and graphic images. It lets you communicate in a network, with reading devices and other controllers. It features layout editor to format print images, serial port settings, data assignment in order received and product tracking and logging.

Drives varying print technologies. Lets you upgrade or add system features down the road!

BK700 Controller with exclusive Buskro IQ Compose software. This portable print station can be used with Buskro and competitive bases.

BK700 Portable Controller includes a portable enclosure that houses the controller, keyboard, drives and an inkwell of choice. The unit is comprised of the following components:

- **Controller Enclosure** — Features PC loaded with Compose IQ Software, PC support cards, Datapath card, power management system, field control board and optional serial card.
- **Inkwell Assembly** — Contains ink supply system, control electronics and print head power/vacuum requirements. Inkwell is dependent on technology chosen. Choose from HPQ, Elite, Atlas or combo HPQ/Elite print technologies.
- **Operator Console Assembly** — Houses main power switch, reset button, floppy and CD drives, tray-mounted keyboard and VGA display.
- **Wheel-Equipped Stand** — Permits easy movement. In addition, a latching mechanism and docking station secure the controller to the transport of your choice.

The Ultimate in Flexibility

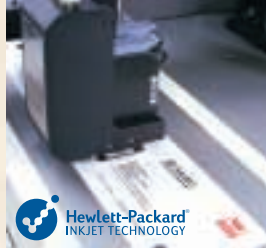

The open architecture of Buskro equipment allows a wide variety of mix and match system configurations. You can create a system that's perfect for your needs by choosing from a range of print technologies, transport bases and accessories.

BUSKRO BK700
IQ CONTROLLER WITH
SOFTWARE

Build a system that meets your needs!

Choose your ink technology:

HPQ

HPQ print head comes in multiple configurations for flexible coverage abilities. It can combine text and graphics within a large print area. Quick change cartridges come in four colors (red, green, yellow, blue) and black.

Elite

Elite produces impeccable images on flats, magazines, catalogs, books, inserts, inside folded pieces and more. Elite offers the speed of inkjet and the print quality of laser.

Two Heads Are Better Than One!

Combo Capability

Elite and HPQ systems can be combined on the same operating platform. You can quickly change from one technology to the other and back again. You get two separate technologies with different and distinctive qualities on one unit.

Atlas

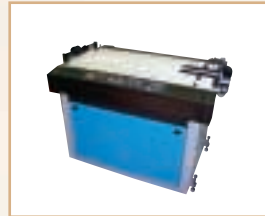

This solvent-based ink solution is fast drying on most glossy stocks. Atlas uses new Monet™ inks to produce high-quality images. It features fast print speeds, excellent reliability and low consumable costs.

Choose your transport method:

BK60B Offline Base

This stand-alone base combines the latest features, soundproof vacuum pump chamber and heavy-duty construction for years of quiet, trouble-free operation.

BK71B Inline Base

Offers the same great features and benefits of the BK60B but is designed for inline applications.

Competitive Bases & More

Add the BK700 Controller to other OEM transports to upgrade those systems to the latest Buskro print technology. Or attach to other devices such as saddle stitchers, poly baggers, envelope inserters, etc.

Or get it all in one great package!

BK765 System

BK700 controller with BK71B makes up the new BK765 Inkjet system with BK720 Friction Feeder and Flip-up Table. The Friction Feeder provides excellent feed performance for light-weight material at fast speeds (40,000 PPH).

Upgrade or add system features as you grow, such as optional OCR and selective systems management functions!

Call 800-677-3525 to discuss your particular application or learn more about how the Buskro BK700 can solve your diverse application needs.
